**ATG**

BETTER VALUE.  
SMARTER CHOICE.

**PRIMEX**  
EXPERT FOR THE EXTREME

# Segmentation of Forestry at ATA

## Agriculture operations

- Mostly even surface
- Soil protection & environment friendly
- Traction, Self cleaning & Low soil compaction
- On/Off road suitability
- Increased productivity

## Construction, Material Handling, Port & Mining

- Stability
- Low down time
- Low heat built up
- Low wear
- Higher load carrying

## Forestry operations

- Mostly uneven surface – Hill side
- Traction
- Stability
- Cuts & Puncture resistance
- Suitable to operate with ancillary aids
- Self cleaning & low soil compaction

Forestry operations are much tougher hence need toughest tires

Various activities are carried out in forestry operations and different types of applications are used for the same-

- A **skidder** is any type of heavy vehicle used in a logging operation for pulling cut trees out of a forest in a process called "skidding", in which the logs are transported from the cutting site to a landing.

# Key Operational Needs of Skidder tire

Parameters

- Superior traction
- High puncture resistance
- Suitable for heavy duty application
- Self cleaning
- Cut and crack resistance
- Low slippage
- Side and longitudinal stability
- Suitable to be used by chains

**Chains are used in this tires as ancillary traction aids.**

Expectations from the tire	Solution
Superior traction	Variable lug angle
Self cleaning	Plateau layers
Cut and crack resistance	Forestry compound
Side and longitudinal stability	Variable lug angle
High puncture resistance	Steel belt construction

## Features-

- Large ground contact area provides wide footprint.
- Special lug design
- Less damage to soil
- Gives good self-cleaning
- Provides excellent traction
- Slide-slippage proof

### Special compound + Steel Belted construction

- Protects against cuts & puncture

### Centre Overlapping

- This provides good roadability
- Drive comfort

Designed for all temperatures, and it performs well in “downed” timber

## Application
